RelTimeToStr

%RelTimeToStr function

Old name

%RTToStr

Function

Function converts given time interval to a text string according to entered mask.

Declaration

```
TEXT %RelTimeToStr(
   REAL in TimeR,
   TEXT in mask
 )
```

Parameters

timeR	Time interval.
mask	Time format of result string.

Note

Position of individual time components is given by the occurrence of the following strings in the entered mask.

String	Description
ddd	Number of days
hh	Hours
mi	Minutes
ss	Seconds
mss	Milliseconds

Example

```
%RTToStr(M.TiA_01, "ddd hh:mi:ss.mss")
```
