

GetColsNr

%GetColsNr function

Function

The function returns a column count of a structure.

Declaration

```
INT %GetColsNr(  
    HBJ in objRef  
)
```

Parameters

objRef	Reference to Structure definition or Structured variable .
---------------	--

Description

The function returns a column count of the structured variable (or structure definition) as a number. HBJ expression returns an object attribute [\HBJ](#).

Example

```
%GetColsNr(SD.Struktura\HBJ) ; it returns a column count  
%GetColsNr(SV.Struktura\HBJ) ; it returns a column count  
%GetColsNr(Sec\HBJ)          ; it returns an invalid value
```
