GetColName

%GetColName function

Function

The function returns the name of the specified structure column.

Declaration

```
TEXT %
```

GetColName

```
(
    HBJ in objRef,
    INT in index
 )
```

Parameters

objRef	Reference to an object of Structure definition or Structured variable type.
index	Column index.

Example

The function returns the name of given column of specified structure (or structure definition) as a text. Column is given by its serial number. Expression of Hbj type returns an object attribute \HBJ.

```
%GetColName(SV.Structure\HBJ, 1)    ; returns the value of "Text"
%GetColName(SV.Structure\HBJ, 2)    ; returns the value of "Int"
%GetColName(SV.Structure\HBJ, 10)   ; returns invalid value
```

See also the attribute: \HBJ
