

GetEnvStr

%GetEnvStr function

Function

The function retrieves the value of the specified environmental variable.

Declaration

```
TEXT %GetEnvStr(  
    TEXT in envVarName  
)
```

Parameters

envVarName	Name of environmental variable.
-------------------	---------------------------------

Return value

The value of the environmental variable. If the environmental variable doesn't exist, it returns empty text (text with zero length).

Example

```
TEXT _value  
  
_value := %GetEnvStr("PATH")
```
