

# XML\_SaveDocument

## %XML\_SaveDocument function

**Function**

**Declaration**

The function saves the XML document to the specific file on the disk.

```
BOOL %XML_SaveDocument(  
    INT in document,  
    TEXT in fileName[,  
    TEXT in encoding = "utf-8"]  
    [,BOOL in useProcInstruction]  
)
```

**Parameters**

<b>document</b>	Handle to XML document.
<b>fileName</b>	File name.
<b>encoding</b>	Encoding, in which the document will be saved. You can use "utf-8" or "windows-1250".
<b>useProcIn struction</b>	Disables the displaying of the procedural instruction <?xml version="1.0" encoding="xxx"?>, where "xxx" defines encoding, which is in fact in the "encoding" parameter.

**Return value**

**Description**

**Example**

@TRUE - document saved, @FALSE - cannot save the document.

The function saves the given XML document on the disk.

```
BOOL _ok  
_ok := %XML_SaveDocument(_doc, "c:\data.xml")
```
