

StructReplace

%StructReplace function

Function

The function replaces a value defined by the parameter *toDefValue* in a structure column *refToColumn* within rows defined by the parameters *rowFrom* and *rowTo* with a value defined by the parameter *replaceWithValue*.

Declaration

```
%StructReplace(  
    in refToColumn,  
    in toFindValue,  
    in replaceWithValue,  
    INT in rowFrom,  
    INT in rowTo  
)
```

Parameters

refToColumn	Reference to a column.
toFindValue	Value to replace with.
replaceWithValue	Value to fill into items.
rowFrom, rowTo	Integer expressions.

Description

If *rowFrom*=*rowTo*=0 => the function sets the value defined by the parameter *value* in entire column. The column is defined by the reference to an item from this column (e.g. *_rec^item*).
