

PointLastValidValue

Declaration

```
KomUniVal(_stdcall *PointLastValidValue)(HOBJ PtID);
```

Parameters

PtID	I/O tag ID.
------	-----------------------------

Description

The function returns [KomUniVal](#) structure with the last required valid value of the I/O tag. If the I/O tag with ID, defined by PtID parameter, does not exist, *Invalid_ValueStatus (0x0)* is set in the item *Status*.
