

WriteToLine

Declaration

```
unsigned int (_stdcall * WriteToLine)(H0BJ StID, void * Data, unsigned int Len);
```

Parameters

StID	Communication station ID .
Data	Pointer to a buffer of the data to send.
Len	Number of bytes to send.

Description

The function writes data with defined length into an asynchronous line with parameters defined according to a mode of particular station.

Return value

True / False according to the function success.
