# Resize

Resize graphic objects

You can resize a graphic object in the edit mode. After selecting a graphic object, it is outlined by a rectangle with squares. Using the squares you can arbitrarily resize the graphic object. Position of the squares depends on the graphic object type. For example: in a rectangle, the squares are placed in the corners and sides of the rectangle. Selecting a multiline, the squares are placed in the beginning and end points and in the breaking points.
Example of resizing the frame

Selected graphic object is outlined by a frame. After selecting the object, there is one point (square) circumscribed - currently selected point.
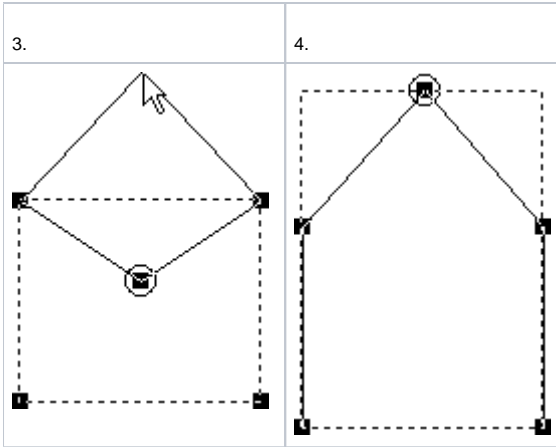

1. Click on the graphic object.
2. Point the mouse cursor to one of the squares. The cursor shape changes to e.g. ↗ (double arrow).
3. Press and hold down the left mouse button.
4. Drag the square to required position and release the mouse button.

1.	2.
3.	4.
