OnDragEnd

OnDragEnd picture event

Declaration

```
ENTRY OnDragEnd(IN INT _refID, IN INT _dropped)
; action
END OnDragEnd
```

Parameters

_refId	For global event handler - identifier of source graphic object.
_dropped	Contains identifier of data transfer type that was done when executing Drop operation. Possible values: • dtNone => 0 (aborted Drag operation by a user) • dtCopy => 1 • dtMove => 2 • dtShortCut => 4

Description

Picture event is generated when a user releases left-mouse button after starting Drag operation. Within event handler, there must be detected what type of data transfer (*copying, moving, creating a link*) a user wants to do and accordingly to change or keep the contents of graphic object.
If the data transfer type (given by *dropped* parameter) is *moving*, the selected element must be removed from the graphic object.

Example

```
ENTRY OnDragEnd (IN INT _refID, IN INT _dropped)
INT _idxSel
IF _dropped = 2 THEN
_idxSel := %HI_GetSelectedItem(_refId)
CALL RemoveItem(_refId, _idxSel)
END IF
END OnDragEnd
```
