

# OnClick

## OnClick picture event

Declaration	<div>Global handler:</div> <div><pre>ENTRY OnClick(IN INT _refId) ; script actions END OnClick</pre></div> <div>Special handler:</div> <div><pre>ENTRY XXX_OnClick ; script actions END XXX_OnClick</pre></div>				
Parameters	<table><tr><td>_refId</td><td>Parameter of <b>INT</b> type (required for global handler).</td></tr><tr><td><b>XXX</b></td><td>Name of Reference variable connected to graphic object (without the character "_").</td></tr></table>	_refId	Parameter of <b>INT</b> type (required for global handler).	<b>XXX</b>	Name of Reference variable connected to graphic object (without the character "_").
_refId	Parameter of <b>INT</b> type (required for global handler).				
<b>XXX</b>	Name of Reference variable connected to graphic object (without the character "_").				
Description	<p>The picture event is being generated by left-clicking the graphic object (for Windows control of <a href="#">Tab control</a> type, the picture event is being generated when switching between tabs. The picture event is also generated when given tab was removed (made invisible) using the function <a href="#">HI_SetVisible</a> (actually, the user selected another tab) - there is generated the picture vent for the first visible tab from the left.</p> <p>Windows controls of <a href="#">List box</a> and <a href="#">Spin button</a> types do not generate the picture event and therefore the special handler is not allowed for them.</p>				
Example	<div>Special picture event handler:</div> <div><pre>; picture event handler: Clicking the graphic object ; with reference variable_BtnOK assigned</pre></div> <div><pre>ENTRY BtnOK_OnClick %HI_ClosePicture() ; closing picture END BtnOK_OnClick</pre></div> <div>Global picture event handler:</div> <div><pre>; picture events handler: Clicking on graphic objects ; that has no special handler defined</pre></div> <div><pre>ENTRY OnClick(IN INT _refId)  ; _refId - value of reference local variable assigned to graphic object IF _refId = _BtnOK THEN ; test, that determines the graphic object ; the user clicked on %HI_ClosePicture() ; closing picture ENDIF END OnClick</pre></div>				
Note	<p>If both the handlers are defined in picture script, the global handler will never be called for _refId=_BtnOK, because a special handler is already defined.</p>
