

Text Fonts

Text fonts

Process [D2000 HI](#) allows to resize opened pictures with keeping their contents by predefinition of the transformation matrix for the presentation space of given picture. For this reason, only vector-defined text fonts supporting the feature mentioned above can be used in pictures. Generally, one text font used in various sizes is enough for picture. To make creating texts in the process [D2000 GrEditor](#) easier, there is the possibility to configure text fonts.

Each text font contains the basic text parameters:

- font
- font style
- size
- effects
- script

To create, modify and delete fonts in the GrEditor environment click the item **Text fonts** from the menu **Configuration Gr**.

Note: In GrEditor, there is implicitly defined the font ***Default**. The text font can be neither edited nor deleted.
