

OnTextChanged

OnTextChanged picture event

Declaration

Global handler:

```
ENTRY OnTextChanged(IN INT _refId)
; script actions
END OnTextChanged
```

Special handler:

```
ENTRY XXX_OnTextChanged
; script actions
END XXX_OnTextChanged
```

Parameters

| | |
|---------------|---|
| _refId | Parameter of INT type (required for global handler). |
| XXX | Name of Reference variable connected to graphic object (without the character "_"). |

Description

The picture event is being generated when given Windows control of [Text entry field](#) type is not active (loosing focus) and its text has been changed. Usually, when the user enters an text and goes to another Windows control.

Example

Special picture event handler:

```
; picture event handler: Change of the text in the text entry field with
; reference variable _EField assigned
```

```
ENTRY EField_OnTextChanged
```

```
; script actions
END EField_OnTextChanged
```

Global picture event handler:

```
; picture events handler: Change of a text in text entry fields,
```

```
; which has no special handler defined
```

```
ENTRY OnTextChanged(IN INT _refId)
```

```
; _refId - value of reference local variable assigned graphic object
IF _refId = _EField THEN ; test that determines the text entry field
; in which the user changed the text
; script actions
```

```
ENDIF
END OnTextChanged
```

Note

If both the handlers are defined in picture script, the global handler will never be called for `_refId=_EField`, because a special handler is already defined.
