HI_GetDynamicSearching

%HI_SetDynamicSearching, %HI_GetDynamicSearching functions

Function

Function **%HI_SetDynamicSearching** sets a dynamic searching in the Windows control List box type.

Function **%HI_GetDynamicSearching** returns an integer value which informs about setting of dynamic searching in Windows control List box.

Declaration

```
%HI_SetDynamicSearching(
   INT in refId,
   INT in param
 )

 INT%HI_GetDynamicSearching(
   INT in refId
 )
```

Parameters

refId	Reference to a graphic object (reference variable).
param	Parameter that can acquire these values: 0 - disables dynamic searching 1 - enables dynamic searching 2 - enables dynamic searching with restriction of contents

Description

After the dynamic searching is enabled by **%HI_SetDynamicSearching**, the first item which is identical to entered signs is selected in the list.
If the dynamic searching with restriction of contents is enabled, the different items become temporarily invisible. The function is applicable only for Windows control List box.

WARNING: When calling the function **%HI_SetDynamicSearching**, the items from the list disappear.

Return value

0 - disables dynamic searching
1 - enables dynamic searching
2 - enables dynamic searching with restriction of contents
