

HI_SetSelEF

%HI_SetSelEF function

Function

The function retrieves a current cursor position (row/column) within the windows control [Text entry field](#).

Declaration

```
%HI_SetSelEF(  
    INT in refEntryField,  
    INT in bPos,  
    INT in ePos  
)
```

Parameters

refEntryField	Reference to <i>Entry field</i> (reference variable).
bPos	Beginning of selection.
ePos	End of selection.

Description

If the beginning is 1 and the end is 0, all the text in the edit control is selected. If the beginning is 0, any current selection is deselected.
