

# HI\_SetAlarmData

## %HI\_SetAlarmData function

**Function**

**Declaration**

The function sets a logical group and mask to filter alarms displayed in displayer of [Alarms](#) type.

```
%HI_SetAlarmData(  
    INT in refId,  
    HOBJ in refToAlGroup  
    [, TEXT in _mask],  
)
```

**Parameters**

refId	Reference to displayer ( <a href="#">reference variable</a> ).
refToAlGroup	Reference to <a href="#">alarm logical group</a> .
_mask	Optional parameter - <a href="#">mask</a> for lists of alarms. If the parameter is not specified or its value is "" (empty string) the function keeps the previous masks specified for all alarm lists (critical, uncritical and blocked).
