

D2000 HI Process

Operator's work with D2000 HI process

Process [D2000 HI](#) (Human Interface - user's console) provides communication of operator with D2000 dispatching and monitoring system. This process allows to display data of the D2000 system using the graphic interface GUI of the operating system Windows NT. Process [D2000 HI](#) allows to:

- display values and states of objects (I/O tags and Eval tags, stations, lines, alarms) in graphic and numerical forms,
- control objects: digital outputs, analog and integer outputs, stations, time outputs,
- display graphs,
- display graphic reports,
- browse historical values,
- browse logged system data,
- start reports,
- start command files,
- handle alarms (acknowledge, block, unblock).
