D2000 Archiv

D2000 Archiv is the process providing for acquisition, processing and distribution of historical values. It is used to archive of all D2000 system objects, which have a value. There is used Sybase SQL Anywhere as the database tool for maintenance of archives. Using a database of SQL type allows to archive a large data quantity and provides a high level of data integrity.

Possible use of the archive:

- Displaying historical values in the form of graphs
- Print of protocols and compositions
- Statistical evaluation
- Data export into other systems

The process **Archiv** has no desktop for interaction with user.
