# D2000 Multiserver Systems

D2000 Multiserver system consists of several (at least two) D2000 application servers, that can be accessed by means of one operator's console (process D2000 HI). Process **D2000 HI** provides full access to each of the servers at the same time.

The following figure shows two application servers A and B, that are accessed by D2000 HI user:

Requirements:

1. For each of processes D2000 Server, there must be defined its identifier (number) in the **multiserver system** - the chapter Changing the server number.
2. Settings of process D2000 HI - the chapter HI in multiserver systems.
