

# Starting

## D2000 SAS - Starting

Process [D2000 SAS](#) is a client process of D2000 system. It is ready for use after successful starting and logon to process [D2000 Server](#).

There are the same rules for starting process **sas.exe** as for any other client process of D2000 system. Use the following start parameters: [/S](#) <Server> or parameter [/RD](#)<RDS\_name>.

Next parameters are the same as the [start parameters](#) of other client processes of D2000 system.

With the [DODM](#), process **D2000 SAS** is represented by an object of [Process](#) type with the suffix .SAS.

Usually, processes [D2000 SAS](#) and [D2000 Server](#) do not run on the same computer. Therefore process must be started either with the parameter [/S](#) or with the parameter [/RD](#). You also can define the automatic start of process - e.g. by using the utility [StartCli](#).
