[Groups](#)
[Parameters](#)

General properties

Description

A text string describing process. Maximum: 128 characters.
Possibility to use the [Dictionary](#) (to open click **CTRL+L**).

Value type

Selection of an object value type. There is only one value type for processes - **Pr-Process**.

Parameters

Title

Text string. Maximum: 200 characters.

Path

Path to "exe" file of process. If process is located in the [installation directory](#), you needn't enter the path. If is not located there, you have to enter the path.

Directory

Work directory of process after its start.

Parameters

[Start parameters of processes](#). The list of parameters is opened after clicking the button **Parameters** placed bellow the entry field.

Start priority

Setting of the start priority of process is important, when [D2000 Server](#) automatically runs several process. Processes are to be started in the order: at first process with the highest priority, at last process with the lowest priority (higher number - higher priority).

Initialization time

Initialization time of process given in seconds. Process [D2000 Server](#) starts another process after expiration of this time.

Autostart

Automatic process launch. If the option **Autostart** is checked, [D2000 Server](#) runs automatically this process during the system start. If process is terminated incorrectly (for example a crash), [D2000 Server](#) will restart it.
