Switches

Warning: Objects of *Switch* type are not included in a standard version of D2000 system.

Objects of *Switch* type are intended for application of D2000 system in energy SCADA systems. These objects implement the behaviour of energy switches and disconnecting switches. They are binary objects with specific complex description of individual states.

Properties of switches:

- registration of spontaneous status changes of SI (Switch Input), SO (Switch Output),
- control logic of energy switches
- blocking logic of energy switches
- blocking logic of in-progress command in the system
- monitoring of command transaction

Processing of objects of *Switch* type is provided by the separate client process **D2000 Switch**. The process implements functional methods of switches.
