

# Values (Communication Lines)

## Values of communication lines

An object of [Line](#) type can acquire the following values in D2000 system:

Object value	Description
True	Line is working.
False	Line is not working.  <b>Note:</b> Solving the line failure problems depends on the <a href="#">line category</a> . Each line generates the output file called <i>line_name.log</i> placed in the subdirectory <b>TRACE</b> of the <a href="#">application directory</a> . The file contains detailed information about the error.

Object value of category **Communication lines** can have set also [the flags](#) (user attributes). Currently they are implemented for following combinations of line categories and communication protocols:

- Line category **TCP/IP-TCP** and communication protocol **IEC 870-5-104 Server**: flags inform about connected clients. For detailed description see [note in the description of the protocol](#).
