Displayer

HTML iframe Component Displayer

Displayer enables to display objects of HTML iframe type.

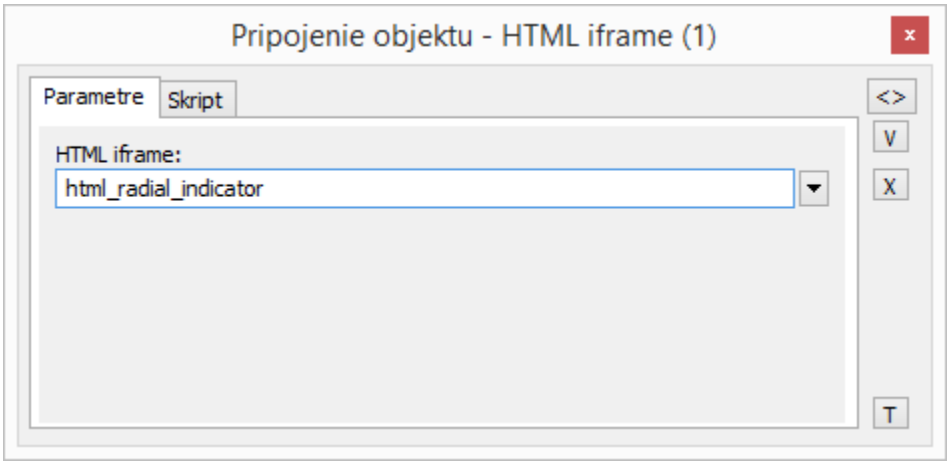
View

Creating a list

1. In the Drawing toolbar click on the **HTML iframe** button .
2. Point the mouse cursor to the position of the first displayer corner and click.
3. Point the mouse cursor to the position of the diagonal displayer corner and click.

Configuration of parameters of list is enabled in the Connect object palette by the following tabs:

Parameters



HTML iframe

Select the HTML iframe object to be displayed.

Script

Reference variable

Specifies the name of list in the form of reference variable for use in the picture script.

Metadata

Assignment of application data (metadata) to a graphic object. If the object contains some metadata, the name of the first record will be displayed in the button. Multiple records are indicated by ",...".

Event

Selecting an event for the List element. The list contains the following events:

- OnGotFocus
- OnIFCEvent

- OnLostFocus

Event handler

Defining the event selected in the **Event** parameter.
