### Description

SMS Gateway protocol supports:

- sending SMS
- receiving SMS
- dialing calls
- receiving calls

The implementation is based on the sending and processing of AT commands that are changed through asynchronous serial line.

### Communication line configuration

Communication line category: Modem

#### Communication line parameters:

Parameter	Default value	Meaning
Device		Name of communication port.
Init command	ATEO	AT command that restarts a device.
Dial command	ATD	AT command used when dialing of a telephone number.
Hangup	+++~--ATH	AT command to hang up the connection.
DTR	Checked	DTR signal is used to hang up connection instead of AT command.

### Communication station configuration

Parameter	Default value	Meaning
Trace Data	YES	Both received and sent data are written to log file.
PIN Code	0000	PIN code of SIM card (GSM modem).
Use Semicolon	YES	Semicolon is inserted at the end of ATD command.
Hang Up Incoming Call	YES	Enable to hang up the incoming call in a defined time.
Hang Up Time	35 sec	Defines a duration of incoming call.
Delay Between Rings	3 sec	Some of the modems do not inform about change of status: "ringing -> received", "ringing -> hung up". In "ringing" status, the flags that indicates ringing are sent. If during the set interval the ringing is not indicated, status automat of protocol will change its status to "hang up". Zero disables to use this indication.
Outgoing Call Duration	3 sec	The time after which the outgoing call is terminated.
Modem Is Ready Interval	600 sec	After elapsing of this time, the modem is reinitiated.
Acknowledgment of Receipt	YES	It switches receipts when sending SMS messages.
Service Center Address	+4219053 03303	Phone number of service center for SMS messages. <b>O2:</b> +421 949 909 909 <b>Orange:</b> +421 905 303 303 <b>Telekom (T-Mobile):</b> +421 903 333 000

Read From Modem SMS	60 sec	Interval of checking the received messages and receipts in modem.
Expect OK After Dial	YES	Indicates whether a device sends the answer "OK" after dialing the phone number.

## I/O tag configuration

I/O tags: **Ci, Co, Di, Do, Txtl, TxtO**

Value type	Address	Meaning
<b>Outgoing calls</b>		
TxtO	OUTGOINGTE NUM	it sets the phone number of outgoing call.
Txtl	OUTGOINGRE SULNUMBER	The protocol can send multiple requests to dial a phone number at the same time. These requests are saved to the list and they are dialed gradually. In the I/O tad, the value of the last dialed number is saved. Together with I/O tag with OUTGOINGRESULTFLAG address it informs about a result of call.
Co	OUTGOINGRIN GTIME	It sets duration of outgoing call including the dialing. It can be used as trigger to start dialing. If the phone number (the value of I/O tag with BUSY address is TRUE) cannot be dialed at that time, the values of I/O tags keep in a queue and postponed for later processing.
Di	OUTGOINGRE SULTFLAG	It informs about the result of call. If outgoing call has been received, the value is TRUE, otherwise FALSE.
<b>Incoming calls</b>		
Txtl	INCOMMINGTE LNUM	Contains the phone number of incoming call.
Di	INCOMMINGRI NGING	It indicates that the incoming call is active. At a given moment the value INCOMMINGTELENUM is not valid yet.
<b>Outgoing SMS messages</b>		
TxtO	OUTGOINGSM SNUMBER	Sets the phone number to which SMS message will be sent.
TxtO	OUTGOINGSM SID	It keeps the value of own unique identifier of message. This value helps to find out whether the message could have been sent. It also couples the message receipts with the sent message.
TxtO	OUTGOINGSM SBODY	Sets the text of SMS message. It is a trigger of sending the message, which means that its value must be set as the last. After starting the trigger, the values of necessary I/O tags are saved into the queue. SMS message is ready to send.
Di	OUTGOINGSM SRESULT	Together with the identifier, which is set in I/O tag with address OUTGOINGSMSRESULTID it informs about the status of sending the SMS message.
Txtl	OUTGOINGSM SRESULTID	If there are multiple SMS messages in the queue, there is necessary, together with the identifier, which is set in I/O tag with address, to inform about the status of each SMS message.
<b>Incoming SMS messages</b>		
Txti	INCOMMINGS MSNUMBER	It contains the phone number of received SMS message.
Txti	INCOMMINGS MSBODY	It contains the text of received SMS message.
Ci	INCOMMINGS MSTRIGGERIN	If the new SMS message has been received, the value is incremented by 1. It may be used as the trigger of receiving the new SMS message.
Co	INCOMMINGS MSTRIGGERO UT	It confirms the reading of SMS message. The value from the I/O tag with address INCOMMINGSMSTRIGGERIN is set up in this I/O tag.
<b>SMS receipts</b>		
Txtl	INCOMMINGR ECEIPTID	It keeps the unique identifier of SMS message, which was chosen during its sending.
Ci	INCOMMINGR ECEIPTTRIGG ERIN	If the new SMS receipt has been received, the value is incremented by 1. The value of identifier INCOMMINGRECEIPTID is valid at the particular moment.
Co	INCOMMINGR ECEIPTTRIGG EROUT	It confirms the reading of SMS receipt. The value from the I/O tag with address INCOMMINGRECEIPTTRIGGERIN is set up in this I/O tag.
<b>Common</b>		
Di	BUSY	It informs about modem status.
