

RelTimeToStr

%RelTimeToStr function

Old name

%RTToStr

Function

Function converts given time interval to a text string according to entered mask.

Declaration

```
TEXT %RelTimeToStr(  
    REAL in TimeR,  
    TEXT in mask  
)
```

Parameters

| | |
|--------------|-------------------------------|
| timeR | Time interval. |
| mask | Time format of result string. |

Note

Position of individual time components is given by the occurrence of the following strings in the entered mask.

| String | Description |
|--------|----------------|
| ddd | Number of days |
| hh | Hours |
| mi | Minutes |
| ss | Seconds |
| mss | Milliseconds |

Example

```
%RTToStr(M.TiA_01, "ddd hh:mi:ss.mss")
```
