

NextMonth

%NextMonth function

Old name

%NextMonthT

Function

The function returns the begin time of next month that is moved by an offset given by the parameter `Offset`. Values of the parameter `Offset` may be negative, too. Result is a value of Absolute time type.

Declaration

```
TIME %NextMonth(  
    INT in Offset,  
    UNIVAL in CalcTrigger,  
    INT in timeZone := %GetTimeZone()  
)
```

Parameters

offset	Offset [s].
CalcTrigger	Object - a change of its value causes the function to be recalculated. Its type is optional.
timeZone	Forced time zone to convert to a local time. It is set as a time zone offset from UTC during winter in seconds.
