

# Month

## %Month function

### Function

The function retrieves the time component - month - of given absolute time.

### Declaration

```
INT %Month(  
    TIME in Arg,  
    INT  in timeZone := %GetTimeZone()  
)
```

### Parameters

<b>Arg</b>	Function argument.
<b>timeZone</b>	Forced time zone to convert to a local time. It is set as a time zone offset from UTC during winter in seconds.

### Example

```
%Month(SysTime)      ; the result is the current month of the system time
```
