

Div

%Div function

Function

The function returns the result of integer division of the arguments *arg1* / *arg2*.

Declaration

```
INT %Div(  
    UNIVAL in arg1,  
    UNIVAL in arg2  
)
```

Parameters

arg1	Function dividend of <i>Int</i> , <i>Real</i> or <i>RelTime</i> type.
arg2	Function divider of <i>Int</i> , <i>Real</i> or <i>RelTime</i> type.

```
INT _i  
  
_i := 7.0/4.0          ; the assignment operator rounds the value of the  
variable _i = 2  
_i := %Div(7.0, 4.0)  ; %Div function removes all digits after the  
decimal point and returns _i = 1
```

Note

The function may be used in:

- the expression of object of [Eval tag](#) type
- the statement of object of [Historical value](#) type
- the script of object [Event](#) type
- the script of [active picture](#)
