

GetStrItem

%GetStrItem function

Function

The function returns the word on the specified position in a text string, while the words are divided by the specified delimiter.

Declaration

```
TEXT %GetStrItem(  
    TEXT in string,  
    INT in seq_number  
    TEXT in delimiter  
)
```

Parameters

string	Text string.
seq_number	Sequence number of word.
delimiter	Delimiter.

Example

```
%GetStrItem( "John;Michael;Charles;Jack;Martin",3,";" ) ; the function  
returns the value of "Charles"
```
