

Asc

%Asc function

Function

The function converts the first leftmost character of the specified text to a number (ASCII coding).

Declaration

```
INT %Asc(  
    TEXT in text  
)
```

Parameters

text	Function argument.
-------------	--------------------

Example

If *text* is empty text, the function gets invalid value. Otherwise, it converts the first character to a number within the range of 0...255.

```
%Asc("Hello")    ; returns the value of 72
```
