

StrToRelTime

%StrToRelTime function

Old name

%MkRT

Function

The function converts the given text string to a time interval (relative time).

Declaration

```
REAL %strToRelTime(  
    TEXT in timeString  
)
```

Parameters

timeString

Text in the format below.

Note

The parameter *timeString* must be given in the time format **DDD hh:mm:ss**, where:

DD	INT	Number of days
hh	INT	Hour
mm	INT	Text minute
ss	INT	Second

Example

```
%StrToRelTime("156 14:23:25")
```
