

SetWeak

%SetWeak function

Old name %SetWeakV

Function The function sets or clears the state Weak of the given expression value. The result is a value of the same type as the expression.

Declaration

```
UNIVAL %SetWeak(  
    UNIVAL in expression,  
    BOOL in value  
)
```

Parameters

expression	Optional expression.
value	@TRUE - assign. @FALSE - does not assign the Weak state to evaluated expression value.

Example

```
%SetWeak(U.K4_Absorbtion1+P.K4_AbsorbtionChange, @TRUE)
```
