

# StrToR

## %StrToR function

### Function

The function converts a text to a real number.

### Declaration

```
REAL %StrToR(  
    TEXT in text  
)
```

### Parameters

<b>text</b>	Function argument.
-------------	--------------------

### Example

If *text* is not a correctly entered real number, the function gets invalid value.

```
%StrToR("1.23")      ; returns the value of 1.23
```
