

JSON_ArrayGetValue

%JSON_ArrayGetValue function

Function

Gets the value in the specified item from the JSON array.

Declaration

```
UNIVAL %JSON_ArrayGetValue(  
    INT in handle,  
    INT in index  
)
```

Parameters

handle	Handle to the parent JSON array.
index	Index of the value.

Return value

Value of the BOOL, INT, REAL or TEXT type, or an invalid value.

Description

The function returns the value in the specified item from the JSON array.

If the handle on the JSON array is invalid or the index is invalid, an exception is thrown.

Example

```
INT _arr  
_arr := %JSON_ArrayFromString('["IPESoft"]')  
  
TEXT _txt  
_txt := %JSON_ArrayGetValue(_arr, 1)  
  
%JSON_FreeArrayHandle(_arr)
```
