

Round

%Round function

Old name

%RoundR

Function

The function rounds the first argument to the accuracy given by the second argument. The result is a real number.

Declaration

```
REAL %Round(  
    REAL in Arg1,  
    REAL in Arg2  
)
```

Parameters

Arg1	Value to round.
Arg2	Result accuracy.

Example

```
%Round(123.123,0.01)    ; returns 123.12  
  
%Round(123.123,10.0)    ; returns 120.0  
  
%Round(123.123,5.0)     ; returns 125.0  
  
%Round(123.123,0.2)     ; returns 123.2
```
