

RemoveDiacritics

%RemoveDiacritics function

Function

The function removes diacritical marks from a given text (replaces each character with a diacritical mark by the corresponding one - according to the [table](#)).

Declaration

```
TEXT %RemoveDiacritics(  
    TEXT in str  
)
```

Parameters

str	Text.
------------	-------

Example

```
BEGIN  
    TEXT _txt  
    ; text with diacritical marks  
    _txt := "šžáéěä"  
    ; clear diacritical marks  
    _txt := %RemoveDiacritics(_txt)  
END
```

The value of the parameter *_text* is "lsczcaleEA".
