

ColumnSum

%ColumnSum function

Function The function returns the sum of the valid values in the specified structured variable column. The result is a real number.

Declaration

```
REAL %ColumnSum(  
    in StructVar  
  
    ^  
  
    Column  
)
```

Parameters

StructVar	An object of Structured variable type.
Column	Column name.

Note The function sets the user flags for the resulting value as a sum of user flags of individual values.

Example

```
%ColumnSum(SV.Structure^Int)
```
