

GetColDescript

%GetColDescript function

Function	The function returns the description of the specified structure column.				
Declaration	TEXT % GetColDescript (HBJ in objRef, INT in index)				
Parameters	<table><tr><td>objRef</td><td>Reference to an object of Structure definition or Structured variable type.</td></tr><tr><td>index</td><td>Column index.</td></tr></table>	objRef	Reference to an object of Structure definition or Structured variable type.	index	Column index.
objRef	Reference to an object of Structure definition or Structured variable type.				
index	Column index.				
Example	The function returns the description of a given column of specified structure (or structure definition) as a text. The column is given by its index number (starting from 1). Expression of <i>HBJ</i> type returns an object attribute \HBJ. If the column is not from the structure (or structure definition) range or the object is not the structure (or structure definition), the function returns an invalid value. <pre>INT _iHbj INT _icol BOOL _bok TEXT _description _iHbj := %StrToHBJ("SV.DATA") _iCol := 1 _bok := %OpenRefToObject(_iHbj,@TRUE) IF _bok THEN _description := %GetColDescript(_iHbj,_iCol) ENDIF</pre>
