

# GetStrItem

## %GetStrItem function

### Function

The function returns the word on the specified position in a text string, while the words are divided by the specified delimiter.

### Declaration

```
TEXT %GetStrItem(
    TEXT in string,
    INT     in seq_number,
    TEXT in delimiter,
    BOOL    in bTrim := @TRUE
)
```

### Parameters

<b>string</b>	Text string.
<b>seq_number</b>	The sequence number of the word.
<b>delimiter</b>	Delimiter.
<b>bTrim</b>	@TRUE - The returned word will be trimmed. @FALSE - The returned word will not be trimmed.

### Example

```
%GetStrItem("John;Michael;Charles;Jack;Martin",
3,";")                                ; the function returns the value
of "Charles"
%GetStrItem("John;Michael; Charles ;Jack;Martin",
3,";")                                ; the function returns the value of
"Charles"
%GetStrItem("John;Michael; Charles ;Jack;Martin",3,";", @FALSE)      ;
the function returns the value of " Charles "
```
