

Permissible Combination of identSrc and identDst Parameters

Permissible combinations of identSrc and identDst parameters

The following tables show permissible combinations of the parameters *identSrc* and *identDst* for **SET WITH** and **SET AS** actions. For an easier view of the combinations in these tables, the following terms for names of objects or **local variables** are used.

Declaration of local variables and existing objects:

	recObj	an object of Structure definition type
	rO	an object of Structured variable type
ALIAS	<u>a</u>	ALIAS (non-typed)
ALIAS (recObj)	<u>rA</u>	ALIAS (typed)
RECORD (recObj)	<u>r</u>	a local variable of <i>RECORD</i> type
	OI	structure item of <i>reference to an object</i> type

Permissible combinations (**SET WITH**)

IdentDst/identSrc	<u>a</u>	rO	rO^OI	rO[i]	rO[i]^OI	<u>rA</u>	<u>rA^OI</u>	<u>rA[i]</u>	<u>rA[i]^OI</u>	<u>r</u>	<u>r^OI</u>	<u>r[i]</u>	<u>r[i]^OI</u>	obj
_a														
rO														
rO^OI														
rO[i]														
rO[i]^OI														
<u>rA</u>														
<u>rA^OI</u>														
<u>rA[i]</u>														
<u>rA[i]^OI</u>														
<u>r</u>														
<u>r^OI</u>														
<u>r[i]</u>														
<u>r[i]^OI</u>														

Permissible combinations (**SET AS**)

IdentDst/identSrc	<u>a</u>	rO	rO^OI	rO[i]	rO[i]^OI	<u>rA</u>	<u>rA^OI</u>	<u>rA[i]</u>	<u>rA[i]^OI</u>	<u>r</u>	<u>r^OI</u>	<u>r[i]</u>	<u>r[i]^OI</u>	obj
_a														
rO - whole contents														
rO^OI [1]														
rO[i]														
rO[i]^OI														
<u>rA - routing</u>														
<u>rA^OI [1]</u>														
<u>rA[0] - whole contents</u>														
<u>rA[i]</u>														
<u>rA[i]^OI</u>														
<u>r - whole contents</u>														
<u>r^OI [1]</u>														
<u>r[i]</u>														
<u>r[i]^OI</u>														

- permissible combination
