

Value Types of D2000 System Objects

Value types of D2000 system objects

All the values to which the system assigns values are called **active objects** ([classification of D2000 system object](#)). Values of various types can be assigned to active objects. Admissible value types for individual objects are shown in the following table.

	D - logical value I - integer value R - real value Ta - absolute time				Tr - relative time Li - Line Al - Alarm St - Station			Pr - Process Txt - Text Q - quadrat value			
	D	I	R	Ta	Tr	Li	Al	St	Pr	Txt	Q
Alarm							x				
Calendar		x									
Database		x									
Day type		x									
Eval tag	x	x	x	x	x						
Historical value	x	x	x	x	x	x	x	x	x		x
I/O tag	x	x	x	x	x						x
Line						x					
Process									x		
Remote tag	x	x	x	x	x						
Station								x			
System tag		x	x								
Time channel	x	x	x								
User variable	x	x	x	x	x					x	
Value array	x	x	x
