

OnDynamicGraph

OnDynamicGraph picture event

Declaration

```
ENTRY    OnDynamicGraph(IN ALIAS _hobj, IN INT _row, IN INT _col, BOOL
_bProcessed)
; actions
END      OnDynamicGraph
```

Parameters

_hobj	Reference to an object the user wants to open a dynamic graph of which.
_row, _col	Row and column - must be defined if the user opens a dynamic graph of an item of object of Structured variable .
_bProcessed	Output parameter - informs the D2000 HI process whether it opens a dynamic graph or not. Possible values: <ul style="list-style-type: none">• @TRUE - process D2000 HI doesn't open a dynamic graph at all• @FALSE - process D2000 HI opens a dynamic graph

Description

The event is being generated if the user clicks the button to open a [dynamic graph](#) from a control /information window opened from picture.

If such a picture event is defined in the script of that picture, the [D2000 HI](#) process opens a dynamic graph only when the value of the parameter *_bProcessed* is @FALSE. Otherwise (the value of @TRUE), the reaction to clicking the button must be handled in the script of that picture.
