OnLostFocus

OnLostFocus picture event

Declaration

Global handler:

```
ENTRY OnLostFocus(IN INT _refId)
; script actions
END OnLostFocus
```

Special handler:

```
ENTRY XXX_OnLostFocus
; script actions
END XXX_OnLostFocus
```

Parameters

_refId	Parameter of the **Int** type (required for global handler).
XXX	Name of the reference variable assigned to Windows control (without the character "_").

Description

The event is being generated when the Windows control (specified by its reference variable *_refId*) loses focus.

Example

Special picture event handler:

```
ENTRY List_OnLostFocus
  ; script actions
END List_OnLostFocus
```

Global picture event handler:

```
ENTRY OnLostFocus(IN INT _refId)
; _refId - value of local reference variable assigned to Windows control
  IF _refId = 0 THEN
    ; no reference variable assigned
  ELSIF _refId = _editRefId THEN
    ; script actions
  ENDIF
END OnLostFocus
```

Note

If both handlers are defined in picture script, the global handler will never be called for *_refId=_List*, because special handler is already defined.
