

HI_EditItem

%HI_EditItem function

Function	The function %HI_EditItem switches the specified item of the displayer of Browser type to the editing mode (control function). The editing mode must be enabled in displayer.						
Declaration	<pre>%HI_EditItem(INT in refId, INT in row, INT in col)</pre>						
Parameters	<table><tr><td>refId</td><td>Reference to graphic object (reference variable).</td></tr><tr><td>row</td><td>Item row.</td></tr><tr><td>col</td><td>Item column.</td></tr></table>	refId	Reference to graphic object (reference variable).	row	Item row.	col	Item column.
refId	Reference to graphic object (reference variable).						
row	Item row.						
col	Item column.						
Note	The parameters <i>row</i> and <i>col</i> define the row and the column of the item. Their values can be within the range of 1						
Example	<pre>; start the editing of the item placed in 3rd row and 2nd column %HI_EditItem(_refId, 3, 2)</pre>						
Note	If the defined row is not on the current page, or the column is hidden, the function has no effect.
