# Controlling Structure Using Browser displayer
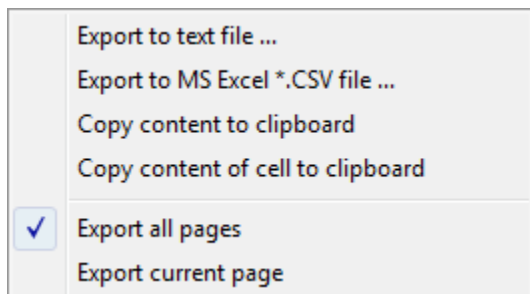

Controlling structures using Browser displayer

The rules for accessing structures by means of the dialog box - the topic Controlling structures in the structure window - may be also applied to browse and edit structures by means of Browser displayer.

The only difference is in the appearance of controls contained, in case of Browser, in the popup menu. This menu is available after pressing the right mouse button.

This popup will display if the parameter **Edit** in Browser configuration is disabled (see Browser displayer configuration). It allows only to export the content.

Apply Changes

Write changes you performed into the database.

Undo

Undo all changes you performed since last saving.

Insert

Insert a new row (for object of *Database table* type only).

Delete

Delete selected row (for object of *Database table* type only).

Condition & Order

Define selection and order conditions (for object of *Database table* type only).

Export to Text File

Save values to a text file.

Export to MS Excel *.CSV File

Save value to a *.csv* file.

Copy to Clipboard

Copy values to the clipboard.

Copy content of cell to clipboard

Copy the text from the cell, over which you press right mouse button, into clipboard.

Export all pages

Export all values.

Export current page

Export values from current page.
