OnActivate

OnActivate picture event

Declaration

```
ENTRY OnActivate(IN BOOL _bActivate)
; actions
END OnActivate
```

Parameters

_bActivate	If the parameter value is @TRUE, a picture window is activated.
	If the parameter value is @FALSE, a picture window is deactivated.

Description

The event is generated when the active picture window is being changed.
OnActivate(@FALSE) is generated for the picture which was activated.
OnActivate(@TRUE) is generated for the picture which is being activated (the picture event is derived from Windows messages WM_ACTIVATE and WM_DEACTIVATE).

Example

```
TEXT _status

ENTRY OnActivate(IN BOOL _bActivate)
  IF _bActivate THEN
    _status := "Window is activated"
  ELSE
    _status := "Window is deactivated"
  ENDIF
END OnActivate
```
