

FindNextEl

FindNextEl

Declaration

```
void * (_stdcall *FindNextEl)(LinListH List);
```

Parameters

List	Handle to a linked list.
------	--------------------------

Description

The function returns an address of the next item in the list.

Return value

The address of the item or NULL if the pointer is at the end of the list. The pointer is initialized by calling the function [FindFirstEl](#) or [FindEl](#).
The list contains only one pointer, that is why you should be careful when accessing the list through more threads.
