

Send a Tell Command to Server

D2000 System Console - sending a Tell command to the server

Right-mouse clicking on the name of a server in the [list of redundant groups, servers and processes](#) and selecting the item **Command** from the open [menu](#) opens the following dialog box. It allows sending a Tell command to the server.

The dialog box is titled "SC Tell". It contains the following fields and controls:

- Command:** A text field containing "SHOW_DYN_INFO" with a dropdown arrow on the right.
- Description:** A text field containing "Shows dynamic information on specified object".
- Parameter:** A text field containing "object_name | HOBJ:" with an empty text box below it.
- Time sent:** A label.
- Time answer:** A label.
- Status:** A label.
- Answer:** A label.
- Buttons:** "Send command" and "Cancel".

Command

Selection of a Tell command.

Description

Description of the parameter.

Parameter

Definition of parameters of the Tell command.

The command is sent to the server after clicking the button **OK**. You can watch the overview of commands (list of received and sent commands, times, responses, ...) in the [text console](#) - the tab **Tell**.
