

# GetStation

## Declaration

```
void (_stdcall *GetStation)(HOBJ LnID, char *Adr, StationParPtr *StParPtr);
```

## Parameters

LnID	ID of <a href="#">line</a> , which is the parent of the station.
Adr	<a href="#">Station</a> address.
StParPtr	Pointer to the <a href="#">StationPar</a> structure. If the value of the pointer is NULL, the station was not found.

## Description

According to the parameter *Adr*, the function finds the station and returns the pointer to a [StationPar](#) structure if it exists, otherwise it returns NULL value.
